Summary

- Software Engineering Technology Co-op student focused on software, data, automation, and support workflows.
- Hands-on with Python, SQL, TypeScript, JavaScript, React, Node.js, FastAPI, PostgreSQL.
- Built APIs, data pipelines, IT workflow automations, and operations dashboards with reviewable outputs and documentation.

Skills

Languages: JavaScript, C#, SQL, TypeScript, Python, PL/SQL, Java, HTML

Frameworks & APIs: REST APIs, .NET, React, Node.js, Express, **FastAPI**, React Native, Public APIs, Expo, CSS

Data Systems & Analytics: PostgreSQL, ETL, Data Pipelines, Reporting, Excel, SQLite, Oracle, pandas, MongoDB, MySQL

Cloud & Developer Tools: Playwright, Cypress, Docker, Git, GitHub Actions, Azure, Cloudflare, Entity Framework Core, Prisma, Jira

Relevant Experience

Support Technician, IT Integrated Services (Co-op)

Jan 2026 – Present

Centennial College | Information Technology Services

Toronto, ON

- Built a Chrome/Edge extension for ServiceNow offboarding case management, extracting SCTASK, ServiceNow asset, and KACE data to generate ready-to-use work notes, manager email templates, and Excel rows from cross-system data.
- Built an internal ITS operations dashboard and worker suite that reconciled reservation, machine, session, booking/archive, and access-event data to identify workflow bottlenecks and surface actionable support states for operators.
- Created a browser-based custom app with Web Serial API and Xterm.js to automate guided lab recovery flows, reducing router recovery time by about **60%** from roughly **10 minutes to under 4 minutes**.
- Cut three booking-verification paths across reservation/archive, session, and access events from **~7-13s** to low- or sub-second responses with local archives and caching.

Projects

ServiceNow Issue Analytics Dashboard

Node.js, JavaScript, JSON

- Built a ServiceNow issue analytics pipeline that processed **~2.1K incident rows** into privacy-safe dashboard outputs for recurring issue analysis, SLA-risk summaries, review queues, and governance-gated decision support.
- Designed taxonomy-driven classification and validation checks around service object, symptom, resolution pattern, root cause, confidence, and needs-review flags while excluding ticket numbers, caller names, assignee names, and raw descriptions from dashboard data.

CareFlow

PostgreSQL, C#, .NET

- Built a .NET 9 and PostgreSQL backend for a veterinary EMR system that manages owners, pets, clinical notes, lab reports, and lab results through documented REST APIs.
- Implemented large-scale development seed generation for a veterinary EMR backend, including **~20K** owners, **~24K** pets, and historical clinical-note and lab-report records for testing.
- Modeled the medical-record domain with Entity Framework Core and Fluent API configurations, then used migrations to keep the database schema versioned and reproducible.

DocSearch RAG System | GitHub

Python, Docker, FastAPI

- Added file validation, 10 MB upload limits, PDF page caps, automated API tests, Docker packaging, and health endpoints to make the semantic-search service easier to review and reproduce.
- Built a FastAPI and FAISS document-search MVP that ingests TXT, PDF, and DOCX files, chunks them into searchable units, and returns citation-backed answers.

Campus Schedule Operations Dashboard

JavaScript, Cloudflare, Playwright

- Generated room/date availability and staff work-allocation outputs across **9.6K availability rows**, with weekly timetables, campus-map navigation, and Excel exports.

JAEHYEOK (EDDIE) LEE

✉ eddie000321@outlook.com  linkedin.com/in/jleedev  github.com/Eddie000321 📍 Toronto, ON

- Built a campus operations dashboard that manages an integrated campus schedule dataset covering 128 rooms and **10.7K schedule events**.

TTC Delay Insights | GitHub

PostgreSQL, Python, FastAPI

- Built a TTC delay analytics project that normalized mixed Excel/CSV transit datasets, loaded them into PostgreSQL, and exposed the results through a FastAPI backend and React charts.

Education

Advanced Diploma in Software Engineering | GPA: 4.30/4.5 (95.6%, A)

Sept 2024 – Present

Centennial College

Toronto, ON

Key Courses: Data Structures & Algorithms | Java | C#/.NET | Databases | Unix/Linux

Bachelor of Science in Computer Science | GPA: 4.4/4.5 (97.8%, A)

Sept 2024 – Present

Korea National Open University

South Korea

Key Courses: Algorithms | Cloud Computing | Data Analysis | Database Systems | Python

Coursework and Certifications

Intro to Database Systems (15-445/645) | Carnegie Mellon University

Ongoing

Topics: Relational design, indexing, and transactions

Cloud Computing | Korea National Open University Coursework

Completed: 2025 Fall

Topics: Azure compute (VMs), Hypervisor, storage, databases, and deployment models

Digital Governance | Coursera Verified

Completed: Aug 2023

Erasmus University Rotterdam | University of Leeds | Verify: WAZ9AMZNBZ46

Additional Work History

Office Assistant

Sep 2023 – Dec 2023

Dongguk University | Medical School Administration Office

South Korea

- Resolved first-line IT issues and authored concise SOPs, enabling non-technical staff to independently resolve about **30%** of recurring issues.
- Prepared and standardized recurring academic and administrative documents, improving retrieval speed and consistency across departments.

Administrative and IT Support

May 2020 – Nov 2021

Republic of Korea Army

South Korea

- Collaborated with cross-department staff to clarify technical issues and explain solutions in clear, non-technical language.
- Managed digital record systems with strict access controls and monitored IT issue workflows, improving response efficiency and reducing repeat incidents by **15-20%**.
